PROFESSIONAL SUMMARY

Full-stack software engineer with 7+ years of combined software, web, and product engineering experience, including 3.5 years at General Motors and 2+ years of professional Java experience. Owns enterprise software from requirements and technical design through frontend/backend implementation, API and data integration, testing, deployment, and production support. Builds network infrastructure tools, workflow automation, multi-source data systems, and AI-enabled applications, combining engineering depth with product and UX fluency.

TECHNICAL SKILLS

- **Languages & Frontend:** Java, Python, TypeScript, JavaScript, SQL, HTML/CSS, React, Angular, Next.js, reusable components, responsive UI, data visualization, accessibility
- **Backend & Data:** Node.js, Java services, REST APIs, API integration, relational databases, Azure SQL, complex queries, data pipelines, multi-source ingestion, workflow automation
- **Cloud & Delivery:** AWS, AWS Lambda, Azure, Azure App Service, Docker, Kubernetes, Terraform, Azure DevOps, CI/CD, Git/GitHub, testing, debugging, production support
- **AI & Collaboration:** AI/LLM integration, Claude Code, GitHub Copilot, Figma, requirements analysis, product/UX collaboration, Agile/Scrum

PROFESSIONAL EXPERIENCE

GENERAL MOTORS | Software Engineer

Jan 2023 - May 2026 | Michigan

- Owned end-to-end delivery of enterprise applications, from requirements and technical design through React/Angular frontends, Java/Python logic, REST APIs, SQL data layers, testing, deployment, and production support.
- Integrated internal and third-party services, multiple databases, and collaboration tools; implemented data contracts, validation, and error handling across interdependent services and workflows.
- Used AWS/Azure, Docker, Kubernetes, GitHub, Azure DevOps, and CI/CD across development, integration, testing, and deployment in secure enterprise environments.
- Diagnosed application, integration, data, environment, and release issues across network/security systems in firewall-restricted enterprise environments.

SELECTED GM ENGINEERING SYSTEMS

TAD | Firewall Request Platform

- Integrated APIs, Slack, Confluence, and an AI assistant into a centralized firewall request platform to help automate a fragmented enterprise process.
- Supported the team in driving toward a two-day turnaround target for a process historically taking up to two months.

ISE | Global Infrastructure

- Built interactive React interfaces and Python/JavaScript-backed workflows to centralize global server, IP, and location data.
- Implemented visual maps, dense operational tables, node creation modules, and cluster management tools through API and data integration.

ASA | Network Environment Management

- Developed Angular/JavaScript and SQL-backed workflows spanning nodes, groups, objects, IPs, and devices.
- Integrated data from multiple databases and comparisons against authoritative records to support global network editing, viewing, and operational visibility.

SHAINA ELIZABETH GONZALES | FULL-STACK SOFTWARE ENGINEER

GENERAL MOTORS | Selected Engineering Systems, continued

Gamified Learning Platform

- Served as frontend lead and sole designer for an employee learning platform; built production Angular/React interfaces and supporting application data and backend workflows.
- Contributed to a 68% increase in course engagement and active platform usage.
- Platform outcomes also included an 85% spike in live-video viewership with 50%+ audience retention.

Broadcasting Services

- Led a calendar and event redesign encompassing role-based administrative approvals, scheduling states, and executive communications.
- Built event and administrative experiences supporting **1,000+ attendees**, translating complex approval and scheduling workflows into functioning interfaces.

Enterprise AI Assistant

- Contributed to an internal conversational assistant combining enterprise information retrieval, guided workflows, and application automation.
- Supported AI-enabled application experiences associated with a 78% surge in high-volume AI chat prompts in the first week.

ENGINEERING DELIVERY & OWNERSHIP

- Translated business and technical requirements into reusable components, guided forms, dashboards, and role-specific tools; collaborated on technical decisions, code reviews, testing, and releases.
- Used Claude Code and GitHub Copilot for codebase exploration, implementation, debugging, refactoring, prototyping, and documentation; independently validated generated output.

EARLIER SOFTWARE & WEB DEVELOPMENT

Selected engagements | 2017 - 2023

Client work during college and before General Motors; some engagements overlapped.

TriNetica

Built application interfaces and functionality with Java, Angular, TypeScript, and Python. Collaborated on requirements, implementation, and testing; applied design systems and UX methods to working interfaces.

Lincoln Financial Group

Contributed to full-stack engineering across relational databases, API endpoint integrations, data pipelines, service relationships, and technical workflows.

Pin Seekers Golf Club

Designed and built a database-backed membership and commerce platform for a nonprofit minority golf organization, including registration, membership payments, course/event enrollment, schedules, rosters, and administrative tracking.

All American Petting Zoo

Designed, developed, launched, and maintained a responsive customer-facing website; resolved technical issues and adapted content and features to business requirements.

EDUCATION

PURDUE UNIVERSITY | Bachelor's Degree, Graphic Design & Computer Science | 2022
