

SHAINA ELIZABETH GONZALES

FULL-STACK SOFTWARE ENGINEER

Michigan | (260) 413-9966 | shaina.gonzales@outlook.com
linkedin.com/in/shainag3 | github.com/Gonzasha345-art | shainagonzalesdesigns.com

PROFESSIONAL SUMMARY

Full-stack software engineer with 7+ years of combined software, web, and product engineering experience, including 3.5 years at General Motors and 2+ years of professional Java experience. Builds secure enterprise platforms spanning network infrastructure, firewall and workflow automation, multi-source data systems, and AI-enabled applications. Combines engineering depth with product and UX fluency to own software from requirements and technical design through implementation, testing, deployment, and production support.

TECHNICAL SKILLS

Languages and Frontend: Java | Python | TypeScript | JavaScript | SQL | HTML/CSS | React | Angular | Next.js | Reusable Components | Responsive UI | Data Visualization | Accessibility

Backend and Data: Node.js | Java Services | REST APIs | API Integration | Relational Databases | Azure SQL | Complex Queries | Data Pipelines | Multi-Source Ingestion | Workflow Automation

Cloud and Delivery: AWS | AWS Lambda | Azure | Azure App Service | Docker | Kubernetes | Terraform | Azure DevOps | CI/CD | Git | GitHub | Testing | Debugging | Production Support

AI and Product: AI/LLM Integration | Claude Code | GitHub Copilot | Figma | Requirements Analysis | Product/UX Collaboration | Agile/Scrum

PROFESSIONAL EXPERIENCE

GENERAL MOTORS | Software Engineer

Jan 2023 - May 2026 | Michigan

- Owned full-stack delivery of enterprise applications, from requirements and technical design through React/Angular frontends, Java/Python logic, REST APIs, SQL data layers, testing, deployment, and production support.
- Integrated internal and third-party services, multiple databases, and collaboration tools; implemented data contracts, validation, error handling, and workflows spanning service dependencies.
- Used AWS/Azure, Docker, Kubernetes, GitHub, Azure DevOps, and CI/CD across development, integration, testing, and deployment in secure enterprise environments.

Selected GM Engineering Systems

TAD | Firewall Request Platform

Integrated APIs, Slack, Confluence, and an AI assistant into a centralized firewall request platform. Helped automate a fragmented process historically taking up to two months, supporting the team's two-day turnaround target.

ISE | Global Infrastructure

Built React interfaces with Python/JavaScript-backed workflows for global server, IP, and location data. Implemented maps, dense data tables, node creation, and cluster management with API and data integration.

ASA | Network Environment Management

Developed Angular/JavaScript and SQL-backed workflows for nodes, groups, objects, IPs, and devices. Supported ingestion from multiple databases, comparison against authoritative records, and global editing and viewing.

GENERAL MOTORS CONTINUED

Learning and Engagement Platform

Served as frontend lead and sole designer for an employee learning platform with profiles, leaderboards, events, videos, and educational content. Translated Figma designs into production Angular/React interfaces and implemented supporting application data and backend workflows.

Broadcasting Services

Led a calendar and event redesign covering role-based administrative approvals, scheduling states, and executive communications. Built event and administrative experiences supporting audiences of 1,000+ attendees.

Enterprise AI Assistant

Contributed to an early internal conversational assistant combining enterprise information retrieval, guided workflows, and automation within enterprise application experiences.

Engineering Delivery and Ownership

- Translated business and technical requirements into reusable components, guided forms, dashboards, administrative tools, and role-specific experiences; collaborated on technical decisions, code reviews, testing, and release.
- Investigated application, integration, data, environment, and release issues across network/security systems and firewall-restricted enterprise environments.
- Used Claude Code and GitHub Copilot for codebase exploration, implementation, debugging, refactoring, prototyping, and technical documentation; independently validated generated output.

EARLIER SOFTWARE AND WEB DEVELOPMENT

Selected engagements | 2017 - 2023

Client work completed during college and before General Motors; some engagements overlapped.

TriNetica

Built application interfaces and functionality using Java, Angular, TypeScript, and Python. Partnered with engineers, project managers, and stakeholders on requirements, implementation, and testing; applied design systems and UX methods to functioning interfaces.

Lincoln Financial Group

Contributed to full-stack engineering involving relational databases, API endpoint integrations, data pipelines, service relationships, and technical workflows.

Pin Seekers Golf Club

Designed and built a database-backed membership and commerce platform for a nonprofit minority golf organization. Implemented registration, membership payments, course/event enrollment, schedules, rosters, and administrative tracking.

All American Petting Zoo

Designed, developed, launched, and maintained a responsive customer-facing website. Troubleshoot technical issues, updated content, and adapted features to changing business requirements.

EDUCATION

PURDUE UNIVERSITY: Bachelor's Degree, Graphic Design & Computer Science | 2016 - 2022
