

SHAINA GONZALES

STAFF SYSTEMS DESIGN ENGINEER | DESIGN SYSTEMS | FRONT-END | AI TOOLING

(260) 413-9966 | shaina.gonzales@outlook.com | linkedin.com/in/shainag3 | github.com/Gonzasha345-art | shainagonzalesdesigns.com | Michigan

PROFESSIONAL PROFILE

Design engineer and software engineer with 7+ years of combined UX/UI, digital product, web, and software experience, including 3.5 years at General Motors. Bridges design and production engineering across complex enterprise products, reusable UI patterns, React/Angular implementation, accessibility, CI/CD, APIs, data-heavy interfaces, and AI-assisted workflows. Experienced aligning designers, engineers, product leaders, and nontechnical stakeholders around scalable systems that improve consistency, usability, and delivery speed.

ROLE-ALIGNED EXPERTISE

Design Systems & Craft: Design Systems | Reusable Components | Component Architecture | Interaction Patterns | Figma | Wireframing | High-Fidelity Prototyping | Responsive Design | Accessibility | Visual Design | Design QA | Documentation

Front-End & Platform: React | Angular | TypeScript | JavaScript | HTML/CSS | Python | Java | SQL | REST APIs | Azure | Git/GitHub | CI/CD | Kubernetes | Data Visualization

AI & Collaboration: Claude Code | GitHub Copilot | Conversational AI | AI-Assisted Workflows | Technical Prototyping | Agile/Scrum | Stakeholder Influence | Cross-Functional Leadership | Mentoring

PROFESSIONAL EXPERIENCE

GENERAL MOTORS | Software Engineer - UX/UI & Design Engineering Focus | Jan 2023 - May 2026 | Michigan

- Built and refined production React/Angular interfaces for secure enterprise products, translating UX concepts and Figma designs into reusable, responsive UI patterns while working within real API, data, security, and platform constraints.
- Designed scalable interaction patterns for dashboards, maps, calendars, forms, dense tables, approval flows, administrative tools, and guided workflows used across network/security, communications, learning, AI, and dealership-facing products.
- Partnered closely with engineering on APIs, data models, integration behavior, CI/CD, deployment workflows, and design QA, helping reduce drift between intended experience and production implementation.
- Led design reviews and stakeholder walkthroughs, communicated system rationale to technical and nontechnical partners, resolved conflicting requirements, and advocated for accessibility, consistency, reusable patterns, and maintainable implementation.
- Integrated AI-enabled experiences including conversational assistance, workflow automation, intelligent insights, and recommendations; use Claude Code and GitHub Copilot for codebase exploration, implementation, debugging, refactoring, and documentation.
- Helped create user-centered workflows that reduced manual work and task-completion time by approximately 50%.

SELECTED SYSTEMS & PRODUCT WORK

TAD - Firewall Workflow - Helped centralize and redesign a fragmented firewall-request journey historically taking up to two months. Combined process design, API/service integration, conversational assistance, and automation as the team drove turnaround toward a two-day target.

ISE - Global Infrastructure - Designed and built a data-rich global infrastructure experience spanning maps, IPs, servers, locations, nodes, clusters, dense tables, and create/edit workflows, balancing technical complexity with discoverable interaction patterns.

ASA - Network Environment - Designed reusable workflows for nodes, groups, objects, IPs, devices, multi-source data, and gold-source comparison in a technically constrained enterprise environment.

ADDITIONAL GENERAL MOTORS WORK

Gamified Learning Platform - Sole designer and frontend project lead for an employee learning and engagement product with profiles, leaderboards, events, videos, and educational content; translated Figma concepts into production Angular/React experiences.

Broadcasting Services - Led redesign of a complex event/calendar ecosystem with administrative approval workflows supporting executive communications and audiences of 1,000+ attendees.

AI / Conversational Experiences - Contributed to an early enterprise chatbot and AI-assisted workflows for information retrieval, guided actions, automation, recommendations, and intelligent insights.

FREELANCE UX/UI & FULL-STACK DEVELOPMENT | 2017 - 2023

Selected engagements completed during college and before GM; multiple client projects overlapped during this period.

TriNetica - Long-running design-engineering engagement spanning UX/UI systems and full-stack implementation. Created wireframes, journey maps, reusable interface patterns, and Angular experiences while contributing TypeScript, Java, and Python development. Partnered with engineers, project managers, and nontechnical stakeholders to translate requirements into usable, buildable product experiences.

Pin Seekers Golf Club - Designed and built an end-to-end membership/e-commerce experience, including the complete brand identity and production website. Created transactional workflows for membership payments, registration, course/event enrollment, rosters, schedules, and database-backed administration - experience directly relevant to marketplace and commerce-oriented product systems.

Lincoln Financial Group - Engineering-focused full-stack engagement centered on complex databases, API endpoint integrations, data pipelines, and technical workflows. Built foundational experience working within production engineering processes and connecting application behavior across data and service layers.

Growing Minds - Led marketing and digital design for a nonprofit tutoring organization serving families through academic and practical-life learning programs. Designed and built the website and produced branding, billboards, event graphics, photography, campaign materials, and coordinated marketing/event initiatives.

All American Petting Zoo - Designed, developed, launched, and maintained a responsive customer-facing website across a long-running client relationship. Translated stakeholder and customer needs into usable production interfaces while supporting content, usability, ongoing updates, and technical maintenance.

DESIGN-ENGINEERING LEADERSHIP

Agile collaboration | Stakeholder influence | Design rationale and consensus building | Mentoring | Accessibility advocacy | Reusable design patterns | Design QA | Engineering handoff and implementation partnership

EDUCATION

PURDUE UNIVERSITY | Bachelor's Degree, Graphic Design & Computer Science | 2016 - 2022
