

SHAINA GONZALES

FULL-STACK SOFTWARE ENGINEER | REACT • ANGULAR • PYTHON • APIS • AZURE • AI

(260) 413-9966 | shaina.gonzales@outlook.com | linkedin.com/in/shainag3 | github.com/Gonzasha345-art | shainagonzalesdesigns.com | Michigan

TECHNICAL PROFILE

Full-stack software engineer with 7+ years of combined software, web, and digital product experience, including 3.5 years at General Motors. Experience spans secure enterprise applications, frontend engineering, backend logic and services, REST APIs, complex databases, data integration, pipelines, cloud delivery, CI/CD, automation, AI-enabled workflows, and production support. Brings an uncommon combination of engineering depth and product/UX fluency for building technically complex systems that remain usable and maintainable.

TECHNICAL SKILLS

Languages: Python | TypeScript | JavaScript | Java | SQL | HTML | CSS

Frontend: React | Angular | Component Architecture | Responsive Interfaces | Complex Forms & Tables | Dashboards | Data Visualization | Accessibility

Backend & Integration: Node.js | REST APIs | Backend Services | API Integration | Database Integration | Multi-Source Data | Data Pipelines | Workflow Automation | AI/LLM Integration

Cloud & Delivery: Microsoft Azure | Azure DevOps | Azure App Service | Kubernetes | CI/CD Pipelines | GitHub | Git | Deployment Workflows | Environment & Release Troubleshooting

Data & Enterprise Systems: SQL | Azure SQL | Power BI | Network/IP/Server Data | Firewall-Restricted Environments | Secure Enterprise Applications

PROFESSIONAL EXPERIENCE

GENERAL MOTORS | Software Engineer | Jan 2023 - May 2026 | Michigan

- Built and supported secure enterprise applications across React and Angular frontends, Python/JavaScript backend logic, REST APIs, SQL data layers, data integrations, cloud delivery, and production support.
- Developed reusable UI components and complex application workflows including dashboards, global maps, dense data tables, forms, calendars, approvals, administrative tools, role-specific experiences, and data-driven visualizations.
- Integrated internal and third-party services, multiple databases, Slack, Confluence, and AI capabilities; worked with data ingestion, API contracts, validation, error handling, workflow orchestration, and service-to-service dependencies.
- Worked with Azure, Azure DevOps, GitHub, CI/CD, deployment workflows, Azure App Service, and Kubernetes; troubleshoot application, integration, data, environment, and release issues in secure enterprise environments.
- Built and supported network/security workflows involving nodes, groups, objects, devices, IP addresses, servers, locations, clusters, and firewall-restricted systems.
- Contributed to conversational AI, workflow automation, intelligent insights, and recommendation capabilities designed to reduce repetitive work and improve access to enterprise information.
- Used Claude Code and GitHub Copilot for codebase exploration, implementation, prototyping, debugging, refactoring, and technical documentation while independently validating generated output.
- Worked in Agile cross-functional teams across requirements, technical design, implementation, testing, release, stakeholder communication, and continuous improvement.

SELECTED GENERAL MOTORS ENGINEERING SYSTEMS

TAD - Firewall Request Platform - Integrated services and redesigned workflow logic for a centralized firewall-request process that historically could take up to two months, with the team driving turnaround toward a two-day target through automation, integrations, and process improvement.

ISE - Global Infrastructure Experience - Built a React-based global infrastructure experience spanning maps, server/IP/location data, dense tables, node creation, and cluster workflows, with Python/JavaScript backend support and API/data integration.

ASA - Network Environment Management - Worked on Angular/JavaScript and SQL-based workflows for nodes, groups, objects, IPs, devices, multi-database ingestion, gold-source comparison, and global edit/view capabilities.

ADDITIONAL GENERAL MOTORS SYSTEMS

Gamified Learning & Engagement Platform - Served as frontend project lead while implementing a full application with profiles, leaderboards, events, videos, learning content, and supporting application data/backend workflows.

Enterprise AI Assistant - Contributed to an early internal conversational assistant used for information retrieval and guided workflows, combining AI capabilities with enterprise application experiences.

Broadcasting Services / Communications - Built and redesigned event, calendar, approval, and administrative experiences supporting communications ranging from executive-level events to audiences of 1,000+ attendees.

FREELANCE FULL-STACK, WEB & PRODUCT DEVELOPMENT | 2017 - 2023

Selected client engagements completed during college and before General Motors. Multiple projects overlapped within this period; individual client dates are intentionally omitted where exact dates are not confirmed.

Lincoln Financial Group - Technical full-stack engagement centered on complex databases, API endpoint integrations, data pipelines, and engineering workflows. This work provided foundational experience operating more like a software engineer: understanding data relationships, connecting services, learning pipeline processes, and working within a more technically complex environment.

TriNetica - Long-running UX/UI and full-stack engagement. Learned and applied design systems, wireframing, journey mapping, and cross-functional collaboration while building interfaces in Angular and developing with TypeScript, Java, and Python. Worked with engineers, project managers, and nontechnical stakeholders to translate requirements into functioning interfaces.

Pin Seekers Golf Club - Designed and built a complex database-backed membership and e-commerce website for a nonprofit minority golf organization. The product supported membership-fee payments, new-member registration, course/event sign-ups, rosters, timetables, administrative tracking, and database-backed workflows. Also created the organization's branding and logo system.

All American Petting Zoo - Designed, developed, launched, and maintained a responsive customer-facing website, combining web development, UX/UI, stakeholder requirements, content updates, and ongoing technical support.

Growing Minds - Designed and built the website for a nonprofit tutoring organization while also leading marketing and visual communications. Work included digital design, event materials, billboards, graphics, photography, campaign coordination, and event planning support.

EDUCATION

PURDUE UNIVERSITY | Bachelor's Degree, Graphic Design & Computer Science | 2016 - 2022
